16 PIN CONNECTOR PINOUT

+ - 9-30 VDC positive power pin

D1, D2, D3 - Configurable digital Input/Output pins. Open collector output, max output 30 V, 300 mA or Digital input where 0-6 V detected as logic low and 8-30 V – logic high.

CTS - RS232 clear data to send pin (output).

RTS - RS232 request data to send pin (input).

R+ - RS485 receiver positive signal pin.

D+ - RS485 driver positive signal pin.

-- Negative/ground power pin.

— Ground pins for D1, D2, D3, A, RS232 and RS485.

A - Analog input pin. Analog voltage range 0-30 V.

TX - RS232 transmitted data (input).

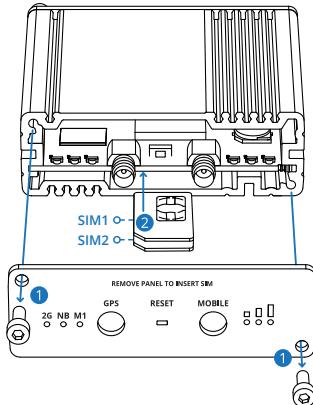

RX - RS232 received data (output).

R- - RS485 receiver negative signal.

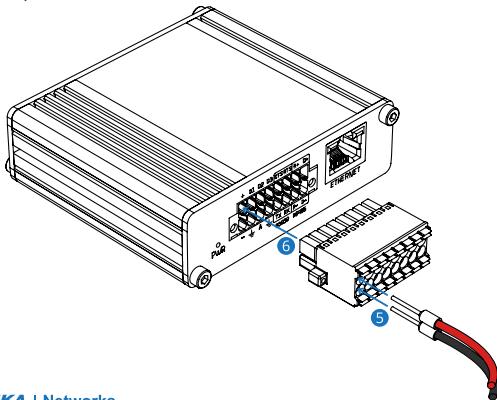

D- - RS485 driver negative signal.

HARDWARE INSTALLATION

1. Unscrew two back panel hex bolts and remove the back panel.
2. Insert your SIM card(s) into the SIM socket(s), which are located on the bottom side of PCB.
3. Attach the panel and tighten the hex bolts.
4. Attach the mobile antenna (max torque 0.4 N·m / 3.5 lbf-in).

5. Connect open PSU leads to 16 pin terminal block:
 - a red wire to top row first contact (+);
 - b black wire to bottom row first contact (-).
6. Connect the 16 pin terminal block to gateway 16 pin connector and plug other end of the power adapter into a power outlet.

DEVICE CONFIGURATION

1. Power on the device and connect the Ethernet cable to your computer.
2. Allow the gateway to boot up. This might take up to 60 seconds.
3. To enter the gateway Web interface (WebUI), type <http://192.168.1.1> into the URL field of your Internet browser.
4. Use login information shown in image A when prompted for authentication.
5. After you log in, you will be prompted to change your password for security reasons. The new password must contain at least 8 characters, including at least one uppercase letter, one lowercase letter and one digit. This step is mandatory, and you will not be able to interact with the gateway WebUI until you change the password.
6. When you change the gateway password, the **Configuration Wizard** will start. The **Configuration Wizard** is a tool used to set up some of the gateway main operating parameters.
7. Go to the **Overview** page and pay attention to the **Signal Strength** indication (image B). To maximize the cellular performance try adjusting the antennas or changing the location of your device to achieve the best signal conditions.

The screenshot shows a login interface for a Teltonika device. At the top left is the Teltonika logo. Below it, the text "AUTHORIZATION REQUIRED" is displayed. Underneath that, a message says "Please enter your username and password". There are two input fields, both containing the text "admin". Below the input fields is a blue rectangular button with the white text "LOG IN".
